One of the key features of this varnish is its curing method. The Epson UV Gloss Varnish is cured using ultraviolet (UV) light. This makes it a quick and efficient way to achieve a glossy finish. The Epson UV Gloss Varnish is transparent in color, which makes it suitable for a wide range of printing projects. It can be used to enhance the colors and details of your prints, without altering their original appearance. The transparent nature of this varnish also allows for the natural texture of the print to show through, which can add an extra dimension to your prints.

Another important attribute of the Epson UV Gloss Varnish is its long outdoor durability. This makes it an ideal choice for prints that will be displayed outdoors or in areas where they will be exposed to the elements. The varnish provides a protective layer that helps to prevent fading, cracking, and peeling.
